CLAIMS

- 1. An aluminum stabilization stacked body (101) formed by stacking a stabilization layer (103) formed with a metal and having a thickness of 0.001-1 µm with any of a sputtering method, a deposition method and an ion plating method on a whole surface of a thin film (102) having a surface formed with aluminum.
- 2. The aluminum stabilization stacked body (101) according to claim 1, wherein
- the thin film (102) having the surface formed with aluminum is aluminum foil rolled to have a thickness of 4-200 µm.
 - 3. The aluminum stabilization stacked body (201) according to claim 1, wherein
- the thin film (202) having the surface formed with aluminum is formed by affixing a polymer film (202a) to aluminum foil (202b).
 - 4. The aluminum stabilization stacked body (101) according to claim 1, wherein
- the metal is any of Cu, Ni, and an alloy including Cu and/or Ni.
 - 5. The aluminum stabilization stacked body (301) according to claim 1, wherein
 - a plated layer (304) is stacked on a surface of the stabilization layer.
